1. You have decided to apply for an internship as a science laboratory assistant at a local community college. The college is interested in finding someone who has the knowledge and skills to operate safely in their laboratories. What specific examples could you include in your application that would let them know how aware you are of indoor science lab safety?

2. You and your friends decide to take a group of scouts to investigate pond life at a local park. The field around the park is very dry and the grass is overgrown. You have 2 hours to prepare the area before the scouts arrive. What safety precautions/equipment will need to be gathered and/or considered before the investigation can safely begin? Is it possible to conduct a safe investigation under these conditions? Explain your answer.
